

IN THE CLAIMS

This listing of claims replaces all prior listings:

1. (Currently Amended) A liquid crystal panel comprising:
a driving substrate;
pixels on a surface of the driving substrate, each of the pixels including a pixel electrode
and a transistor connected to the pixel electrode;
signal lines and scanning lines connected to the transistors;
an alignment film rubbed in a direction substantially parallel to the signal lines or the
scanning lines;
a counter substrate adjacent the alignment film;
a liquid crystal layer between the driving substrate and the counter substrate; and
at least one projection provided in each of the pixels on the pixel electrode at a
substantially central position, relative to two opposite boundaries of the corresponding pixel, the
two opposite boundaries being parallel to the rubbing direction, the central position being
adjacent to a starting position of the rubbing direction and to a boundary not being parallel to the
rubbing direction.
2. (Cancelled)
3. (Original) The liquid crystal panel according to Claim 1, wherein liquid crystal
molecules of the liquid crystal layer have a pre-tilt angle of 4° to 20°.
4. (Original) The liquid crystal panel according to Claim 1, wherein each of the
pixels has a reflective display portion and a transmissive display portion provided in that order in
the rubbing direction.
5. (Original) The liquid crystal panel according to Claim 1, further comprising walls
extending along the borders between adjacent pixels in a direction substantially perpendicular to
the rubbing direction.
